Education

VIT Bhopal University, Bhopal
B.Tech in Computer Science (AI & ML)

Sep 2023–Jun 2027

Technical Skills

Languages: Python, Java, JavaScript

AI/ML: TensorFlow, PyTorch, Scikit-learn, OpenCV, NLTK

Frontend: CSS, JavaScript, React.js

Backend: FastAPI, Node.js

Database: MySQL, MongoDB

Tools & Concepts: Git, REST APIs, DSA, Machine Learning, Deep Learning, NLP, Computer Vision

Experience

Infosys Springboard – AI/ML Intern (Remote) Nov 2025 – Dec 2025

- Built **AI-ImpactSense**, an ML-based earthquake impact prediction system achieving **85%+** accuracy across 3 supervised learning algorithms.
- Engineered data preprocessing and feature engineering pipeline on **5,000+ records**, reducing noise and improving model reliability by **20%**.
- Deployed end-to-end ML pipeline with hyperparameter tuning via **Streamlit**, enabling real-time risk predictions for **4 severity levels**.

Virsis – Project Intern (Remote)

Jan 2025 – Sep 2025

- Improved organic traffic by **30%** through SEO strategies, keyword optimization, and on-page content restructuring across **5+ web pages**.
- Analyzed web traffic data using analytics tools, generating **weekly performance reports** with actionable insights for **3+ active campaigns**.
- Tracked and reported **key metrics** including bounce rate, CTR, and session duration, contributing to a **20%** improvement in user engagement.

Projects

Netra-AI | Real-Time Assistive Navigation System

[GitHub](#)

Tech Stack: Python, PyTorch, OpenCV, YOLOv8, Tesseract OCR

- Designed an end-to-end **computer vision system** with **5 real-time modules**: obstacle detection, fall detection, OCR, currency recognition, and navigation.
- Implemented **YOLOv8-based object detection** achieving **~90%** accuracy at **50–90ms/frame** with custom-trained YOLO model for Indian currency (**~87%**).
- Developed **BFS-based navigation** and voice-driven interaction, reducing hands-free response latency for visually impaired users.

AI-ImpactSense | Earthquake Impact Prediction System

[Website](#) | [GitHub](#)

Tech Stack: Python, Pandas, Scikit-learn, Matplotlib, Streamlit

- Trained and compared **3 supervised ML models** for earthquake severity prediction achieving best accuracy of **85%+** on structured seismic datasets.
- Processed and cleaned **5,000+ records** with feature engineering, improving prediction reliability across **4 impact severity classes**.
- Deployed interactive **Streamlit** web app with real-time prediction, risk visualization, and evaluation metrics dashboard.

Dog Breed Classifier | Deep Learning

[GitHub](#)

Tech Stack: Python, TensorFlow, Keras, OpenCV

- Built a **CNN-based multi-class classifier** identifying **120 dog breeds** with **87%+** validation accuracy using TensorFlow and Keras.
- Applied image preprocessing and **data augmentation** on **10,000+ images**, improving generalization and reducing overfitting by **15%**.
- Deployed model for **real-time inference** via web interface with image upload and top-3 breed prediction output.

Certifications

- Applied Machine Learning in Python — University of Michigan (Nov 2025)
- Job Simulation — Forage Academy (2024)
